

MUMS 2000 Setup to attach Photos

Step #1: Load MUMS/2000 Version 5.74 or higher

Step #2: Run MUMS and write down what it displays on the bottom of the screen after the word "Tables:" (this is where your data is located).

Tables: C:\MT2000\TABLES

Step #3: Inside of MUMS click on File | Setup | System Information | Setup "Photo Field Name" by SSN/SIN or EmployeeID

Step #4: In Windows, Create a folder called "PHOTOS" under where your data is located as per prior step. By doing File | New | Folder and naming it "PHOTOS". The act of creating the "PHOTOS" folder will activate the Photo option in MUMS/2000 and add a button to member's screen.

Step #5: Put your photos in the "PHOTOS" directory and MUMS will display the photo if you click on the new PHOTO button. The Photo button will only be active if the program finds a photo for the member using the ID number you selected and if it ends in BMP, JPG or TGA.

Be sure to close any photo screen before you go on to other records.

Note: If you wish to store photos in a directory other than PHOTOS under your TABLES then you must create an entry in the C:\mt2000\system\mt2000.ini file like.... PhotoDir=c:\myfiles\photos
